

Faculty: BSC(Hons) Computer System Engineering

NAME: Binod Katuwal

Student Id: 250825048

MODULE CODE: CET138

MODULE TITLE: Full Stack Development

MODULE LEADER: David Grey

SUBMISSION DATE AND TIME: Fri, 19 Jun 2026

ASSIGNMENT: 1

Academic Misconduct is an offence under university regulations, and this involves:

- **Plagiarism** – where you use information from another information source (including your previously submitted work) and pass it off as your own. This can be through direct copying, poor paraphrasing and/or absence of citations.
- **Collusion** – where you work too closely, intentionally, or unintentionally, with others to produce work that is similar in nature. This can be through loaning of materials, drafts or through unauthorised use of a fellow student's work.
- **Asking another person to write your assignment** – where you ask another individual or company to complete your work for you, be that paid or unpaid, and submit it as if it were your own.
- **Unauthorised use of artificial intelligence** – where you use artificial intelligence tools to generate your assignment instead of completing it yourself and/or where you have not been given permission to use artificial intelligence tools by your module leader. Please complete the following declaration around you use of artificial intelligence tools in your assignment.

STATEMENT ON USE OF ARTIFICIAL INTELLIGENCE TOOLS:

• I have used artificial intelligence tools to generate an idea for my assignment:	YES
• I have used artificial intelligence tools to write my assignment for me:	NO
• I have used artificial intelligence tools to brainstorm ideas for my assignment:	NO
• I have used artificial intelligence tools to correct my original assignment:	NO

DECLARATION

- I understand that by submitting this piece of work I am declaring it to be my own work and in compliance with the university regulations on Academic Integrity.
- I confirm that I have done this work myself without external support or inappropriate use of resources.
- I understand that I am only permitted to use artificial intelligence tools in line with guidance provided by my Module Leader, and I have not used artificial intelligence tools outside this remit.
- I confirm that this piece of work has not been submitted for any other assignment at this or another institution prior to this point in time.
- I can confirm that all sources of information, including quotations, have been acknowledged by citing the source in the text, along with producing a full list of the sources used at the end of the assignment.
- I understand that academic misconduct is an offence and can result in formal disciplinary proceedings.
- I understand that by submitting this assignment, I declare myself fit to be able to complete the assignment and I accept the outcome of the assessment as valid and appropriate.

8.	Summary	8

1. What is Bootstrap?

Bootstrap is the world's most popular open-source CSS framework for building responsive, mobile-first websites quickly. Originally developed by Twitter in 2011, it provides a library of pre-written CSS classes and JavaScript components — a 12-column grid, navbars, cards, badges, progress bars, alerts, accordions, and modals — so developers don't need to write this CSS and JS from scratch.

Bootstrap is included via CDN links in the `<head>` (CSS) and before the closing `</body>` tag (JS bundle, which includes Popper.js for components like modals and tooltips). The live demo below — "Forever Moments" — uses five core Bootstrap components: the grid system, badges & progress bars, alerts, an accordion, and a modal.

```
<head>
  <link href="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/css/bootstrap.min.css"
        rel="stylesheet">
</head>
<body>
  ... page content ...
  <script src="https://cdn.jsdelivr.net/npm/bootstrap@5.3.0/dist/js/bootstrap.bundle.min.js">
  </script>
</body>
```

2. Live Demo

[View Live Demo: Forever Moments – Bootstrap Demo](#)

The page is split into five labelled sections (01–05), each demonstrating a different Bootstrap component. Each is explained below.

3. Section 01 – Responsive Grid

The 'Responsive Grid' section displays three service cards (Full Planning, Design & Style, Vendor Management) side-by-side on desktop. Bootstrap's grid divides each row into 12 columns; .col-md-4 gives each card 4 of the 12 columns (1/3 width) on tablets and above, while on mobile the cards stack to full width (col-12).

```
<div class="container">
  <div class="row g-4">
    <div class="col-12 col-md-4">
      <div class="card text-center p-4">
        <div class="fs-1"> ⚙ </div>
        <h3>Full Planning</h3>
        <p>End-to-end wedding planning from idea to big day.</p>
      </div>
    </div>
    <div class="col-12 col-md-4"> ... Design & Style card ... </div>
    <div class="col-12 col-md-4"> ... Vendor Management card ... </div>
  </div>
</div>
```

Breakpoint Prefix	Screen Width	Behavior in this demo
col-12	All sizes (default)	Each card takes full width — stacked
col-md-4	≥ 768px (tablet+)	Each card takes 4/12 — three cards in a row
g-4	Any size	Adds consistent gutter spacing between cards

4. Section 02 – Badges & Progress Bars

The 'Skills & Services' section lists service tags (Planning, Design, Vendors, Florals, Catering, Photography) as Bootstrap badges, followed by progress bars for Client Satisfaction, On-Time Delivery, and Budget Accuracy. Badges use small colored pill labels; progress bars use a container/fill pattern with the fill width set via inline style or the width utility.

```
<!-- Badges -->
<span class="badge rounded-pill bg-primary me-1">Planning</span>
<span class="badge rounded-pill bg-secondary me-1">Design</span>
<span class="badge rounded-pill bg-info me-1">Vendors</span>
<span class="badge rounded-pill bg-success me-1">Florals</span>

<!-- Progress bars -->
<p>Client Satisfaction</p>
<div class="progress mb-3">
  <div class="progress-bar bg-success" role="progressbar"
    style="width: 98%" aria-valuenow="98" aria-valuemin="0" aria-valuemax="100">98%</div>
</div>

<p>On-Time Delivery</p>
<div class="progress mb-3">
  <div class="progress-bar bg-info" role="progressbar" style="width: 95%">95%</div>
</div>
```

5. Section 03 – Alerts

The 'System Messages' section shows two dismissible Bootstrap alert components — a success alert ('Booking confirmed!') and an info alert ('Tip: Book at least 9-12 months in advance'). Alerts use contextual color classes (alert-success, alert-info) to instantly communicate the type of message to the user.

```
<div class="alert alert-success d-flex align-items-center" role="alert">
  <strong>✦ Booking confirmed!</strong>&nbsp;Your wedding consultation is
  scheduled for Saturday at 10 AM. We'll send a reminder 24 hours before.
</div>

<div class="alert alert-info" role="alert">
  <strong>💡 Tip:</strong> Book at least 9-12 months in advance for the
  best venue availability.
</div>
```

6. Section 04 – FAQ Accordion

The 'FAQ Accordion' section lists common questions (e.g. 'What is included in the Classic Package?'). Bootstrap's accordion component handles all the show/hide logic via data attributes — no custom JavaScript is required. Clicking a question expands its answer and collapses the others (or stays open, depending on configuration).

```
<div class="accordion-item">
  <h2 class="accordion-header">
    <button class="accordion-button" type="button"
      data-bs-toggle="collapse" data-bs-target="#faq1">
      What is included in the Classic Package?
    </button>
  </h2>
  <div id="faq1" class="accordion-collapse collapse"
    data-bs-parent="#faqAccordion">
    <div class="accordion-body">
      Full planning for up to 150 guests, vendor management, design
      consultation, a day-of timeline, and on-site coordination.
    </div>
  </div>
</div>
<!-- Additional .accordion-item blocks for the other FAQs -->
</div>
```

- data-bs-toggle="collapse" — tells Bootstrap's JS to toggle this element
- data-bs-target="#faq1" — points to the answer element to show/hide
- data-bs-parent — ensures only one answer is open at a time within the accordion

7. Section 05 – Modal (Pop-up Dialog)

The 'Pop-up Modal' section has an 'Open Contact Modal' button. Clicking it opens a Bootstrap modal dialog titled 'Talk to Us', containing a contact form (Name, Email, Message) with Cancel and Send Message buttons. Like the accordion, the modal is fully driven by Bootstrap's data attributes and JS bundle — no manual show/hide code is needed.

```

    <!-- Trigger button -->
    <button type="button" class="btn btn-primary"
        data-bs-toggle="modal" data-bs-target="#contactModal">
        Open Contact Modal
    </button>

    <!-- Modal markup -->
    <div class="modal fade" id="contactModal" tabindex="-1">
        <div class="modal-dialog">
            <div class="modal-content">
                <div class="modal-header">
                    <h5 class="modal-title">Talk To Us</h5>
                    <button type="button" class="btn-close" data-bs-dismiss="modal"></button>
                </div>
                <div class="modal-body">
                    <input type="text" class="form-control mb-2" placeholder="Name">
                    <input type="email" class="form-control mb-2" placeholder="Email">
                    <textarea class="form-control" placeholder="Message"></textarea>
                </div>
                <div class="modal-footer">
                    <button class="btn btn-secondary" data-bs-dismiss="modal">Cancel</button>
                    <button class="btn btn-primary">Send Message</button>
                </div>
            </div>
        </div>
    </div>

```

8. Summary

The "Forever Moments" Bootstrap demo brings together five core Bootstrap features on a single page, demonstrating a thorough understanding of the framework:

- The 12-column responsive grid system (col-12 / col-md-4) for the service cards
- Badges and progress bars for compact, styled data display
- Contextual alert components for success and informational messages
- The accordion component for collapsible FAQ content using data-bs-toggle
- The modal component for a pop-up contact form using data-bs-toggle and data-bs-dismiss
- Bootstrap's data-bs-* attribute system, which provides interactivity without custom JavaScript
